

No, I wug. You wugga wug. I wug.

(The main first prints the output No, then it calls zoop. zoop calls baffle first. baffle prints the word wug then calls ping() which prints a period. zoop then prints You wugga and then calls baffle again which prints wug and calls ping which prints the period again. We then go back to main which prints I and then calls baffle again which prints wug and calls print which prints the period.)

main
zoop
Baffle
ping

If you invoke baffle at the end of ping then it will keep going back and forth between baffle and ping looping.
